

Dementia Care Mapping (DCM) for Realizing Person Centered Care

October 15-18, 2018

Why Bother with DCM?

- Recognize signs of positive/negative mood and engagement of people living with dementia
- Track your Person Centered Care goals and Culture Change efforts
- Monitor challenging times of the day and identify contributing factors
- Improve your quality assurance program
- Evaluate effectiveness of care planning
- Identify training and development issues

Hosted by *The Neighborhoods by Tiger Place, Columbia, MO.*

A Method for Improving the Delivery of Person Centered Care and Improving Quality of Life

Dementia Care Mapping (DCM) is a method to evaluate the delivery of person centered care and, in general, to improve the quality of care delivered to persons with dementia in formal care settings. DCM goes to the real heart of caring by striving to assess care from the viewpoint of the person with dementia. It involves making and recording detailed observations. DCM provides valuable, clear and reliable information for those concerned with quality care for people with dementia. After the data is analyzed, immediate feedback can be given to care partners so that existing practices can be analyzed and improved.

Feedback is done in a way that supports care partners and their improvement ideas. Careless or demeaning care practices and particularly sensitive care practices are highlighted without identifying information about involved care partners.

Who Should Attend?

The course is designed for care partners of persons with dementia and those responsible for improving care practice. It will be of special interest to those concerned with improving the quality of formal care, staff training and care community development issues.

It is suggested that multiple persons from a care setting attend as a team. This builds support for each other as they return to their own setting and begin to assimilate and practice their new skills to enhance the lives of residents and staff.

Topics to be covered include (but are not limited to): Person Centered Care and its application in practice, DCM coding frame and operational rules, developing coding and data analysis skills, briefing and feedback.

Learn through presentations, small group discussions, and practice of skills through group exercises.

Instructors

Marilyn Hartle, MSW, LCSW and LaDonna Jensen, RN, of Jentle Harts Consulting; De Minner, BSN

Marilyn Hartle

LaDonna Jensen

De Minner

Trainers for this session are the only three currently authorized trainers of the DCM method in the United States. Their training was conducted by instructors from the Bradford Dementia Group, University of Bradford, England (founders of the DCM movement). Jentle Harts Consulting now serves officially as lead trainers for DCM in the USA. Both instructors have been Basic mappers since 1999. In 2000 they obtained Advanced Mapping status and in 2001 became Evaluators which entitles them to use the method for research. In 2004 they completed all the requirements set by Bradford Dementia Institute of University of Bradford, Bradford, England and the International DCM Advisory Board to become trainers of the DCM Basic Level course. They completed requirements to teach the Advanced DCM course in 2010. Both instructors are national presenters on person centered care, culture change, leadership skills and other dementia care topics. Jentle Harts offers training and consultation for organizations wishing to implement or enhance person centered care and DCM.

De Minner, RN, has been using DCM in Missouri homes since taking the Basic DCM User course in 2003. She became an advanced Mapper in 2004 and achieved DCM Evaluator status through the University of Bradford in 2005. In 2013 she completed her requirements to become a trainer. She has been in and around Missouri nursing homes since 1994, first as a LTC nurse manager/director and then as part of the MU-Sinclair School of Nursing QIPMO & PRIMARIS programs. She is now associate faculty for the MU-RN & NHA Enhanced Leadership Development Academy.

Entitlements

- Participants will have the opportunity to become Certified DCM Basic Users. Upon successful completion of the course, a Basic User is entitled to carry out DCM for purposes of routine evaluative work within the care setting where the User is employed, either independently or as part of a team of qualified users. If you work as a consultant, you are entitled to map at the care setting(s) to which you currently offer your services, either independently or as part of a team of qualified users.
- All attendees will receive a Certificate of Attendance.
- Jentle Harts has applied for Category I Continuing Education for LSW, LCSW, LMFT & LMHC by the Behavioral Health and Human Services Licensing Board, Indiana Professional Licensing Agency and Indiana State Board of Health Facility Administrators Professional Licensing Agency for Health Facility Administrator CE's.

Registration

The fee is \$800 for the first attendee from a facility and \$700 for additional attendees from the same facility. This fee includes lunch, refreshments and a course packet with a User's Manual. The fee does not cover overnight accommodations or other travel related expenses. **Register soon as class size is limited!**

Course Outline

- The four-day course facilitates participants becoming thoroughly familiar with the method and theory of DCM. The interactive classes inspire confidence in attendees who will be able to immediately apply their learning in practical ways.
- There will be assessments throughout the course.
- Participants should bring a calculator and pencils.
- Participants will receive a Certificate on successful completion of the course. 19 CEUs may be available for social workers and health facility administrators.
